

16073500 Konohiki Stream near Kapaa, Kauai, HI

LOCATION.--Lat 22°04'01", long 159°20'21" referenced to Old Hawaiian Datum, Kauai County, HI, Hydrologic Unit 20070000, Kapaa quadrangle, 1963, 1:24000), Concrete culvert on Lihue Plantation Co. cane road, 1.8 mi north from the mouth of Wailua River, and 2.4 mi southwest of Kapaa High School. Altitude of gage, 30 ft (from topographic map).

DRAINAGE AREA.--3.38 mi².

SURFACE-WATER RECORDS

PERIOD OF RECORD.--1964-67, 1970 to current year.

REVISED RECORDS.--WDR HI-99-1: 1993(P).

GAGE.--Crest-stage gage.

REMARKS.--As the number of streams on which streamflow information is likely to be desired far exceeds the number of stream-gaging stations feasible to operate at one time, the U.S. Geological Survey collects limited streamflow data at sites other than stream-gaging stations. When limited streamflow data are collected on a systematic basis over a period of years for use in hydrologic analyses, the site at which the data are collected is called a partial-record station. Data collected at these partial-record stations are usable in low- or flood-flow analyses, depending on the type of data collected.

Prior to 1973, crest-stage partial-record station records for the State of Hawaii were published in an annual progress report entitled An Investigation of Floods in Hawaii. The following table contains the annual maximum discharge for this station. A crest-stage station is a device which will register the peak stage occurring between inspections of the gage. A stage-discharge relation for each gage is developed from discharge measurements made by indirect measurements of peak flow or by current meter. The date of the maximum discharge is not always certain but is usually determined by comparison with nearby continuous-record stations, weather records, or local inquiry. Only the maximum discharge for the current year is given. Information on some lower floods may have been obtained but is not published here. The years given in the period of record represent water years for which the annual maximum has been obtained.

EXTREMES FOR PERIOD OF RECORD.--Maximum discharge and gage height, 2,530 ft³/s, 16.92 ft., December 14, 1991.

**MAXIMUM PEAK DISCHARGE
WATER YEAR OCTOBER 2005 TO SEPTEMBER 2006**

Date	Discharge, in ft³/s	Gage height, in ft
Mar 15, 2006	790	11.58
