

Water-Data Report 2007

385423118440801 Local number 110A N12 E29 15BCC1

Basin and Range basin-fill aquifers
Undefined Aquifer
Mineral County, NV

LOCATION.--Lat 38°54'22.6", long 118°44'08.3" referenced to North American Datum of 1983, in SW ¼ NW ¼ NW ¼ sec.15, T.12 N., R.29 E., Mineral County, NV, Hydrologic Unit 16050303.

GROUND-WATER RECORDS

WELL CHARACTERISTICS.--Depth 34.5 ft. Upper casing diameter 2.0 in, top of first opening 24.5 ft, bottom of last opening 34.5 ft.

DATUM.--Land-surface datum is 4100 ft above National Geodetic Vertical Datum of 1929. Measuring point: Top of casing, 0.0 ft above land-surface datum, April 6, 2005, to present.

REMARKS.--Walker Lake is a perennial, natural terminal lake that became at-risk because of upstream agricultural diversions. Between 1882 and 1994, upstream diversions caused Walker Lake to decline about 140 feet and the total dissolved solids (TDS) concentrations to increase from 2,500 mg/L to 13,300 mg/L. The Lahontan cutthroat trout (LCT), a threatened species that is native to Walker Lake, has adapted to the high TDS of terminal basins. However, diversions have lowered lake levels and increased TDS to concentrations that threaten the survival of the LCT. The objectives of this project are to develop (1) an improved water budget for Walker Lake and (2) the capability to predict how changes in irrigation practices in and below Mason Valley will affect flows in the lower Walker River so alternatives for supplementing flows can be evaluated.

WATER LEVELS IN FEET BELOW LAND-SURFACE DATUM

[Measurement method: T, electric tape. Water-level status: --, static.]

Date	Water level	Measurement method	Water-level status
Dec 4, 2006	25.71	T	--
