

Water-Data Report 2010

034350021 BARTONS CREEK NEAR CUMBERLAND FURNACE, TN

Lower Cumberland Basin
Lower Cumberland Subbasin

LOCATION.--Lat 36°15'02", long 87°20'00" referenced to North American Datum of 1927, Dickson County, TN, Hydrologic Unit 05130205, at bridge on Stayton Road, 1.9 mi southeast of Cumberland Furnace.

DRAINAGE AREA.--22.3 mi².

SURFACE-WATER RECORDS

PERIOD OF RECORD.--1984-2010

REMARKS.--As the number of streams on which streamflow information is likely to be desired far exceeds the number of stream-gaging station feasible to operate at one time, the Geological Survey collects limited streamflow data at sites other than stream-gaging stations. When limited streamflow data are collected on a systematic basis over a period of years for use in hydrologic analyses, the site at which the data are collected is called a partial-record station. Data collected at these partial-record stations are usable in low-flow or floodflow analyses, depending on the type of data collected.

The following table contains annual maximum discharges for crest-stage stations. A crest-stage gage is a device that will register the peak stage occurring between inspections of the gage. A stage-discharge relation for each gage is developed from current meter or indirect measurements of peak flow. The date of the maximum discharge is not always certain but is usually determined by comparison with nearby continuous-record stations, weather records, or local inquiry. Only the maximum discharge for each water year is given. Information on some lower floods may have been obtained, but is not published herein. The years given in the period of record represent water years for which the annual maximum has been determined.

EXTREMES FOR PERIOD OF RECORD.--Maximum discharge not determined, maximum gage height, 15.88 ft; Apr. 16, 1998.

**MAXIMUM PEAK DISCHARGE
WATER YEAR OCTOBER 2009 TO SEPTEMBER 2010**

Date	Discharge, in ft ³ /s	Discharge qualification code	Gage height, in ft	Gage height qualification code
