

Water-Data Report 2013

## 11525520 Deadwood Creek at Lewiston, CA

Klamath River Basin

LOCATION.--Lat 40°43'02", long 122°48'04" referenced to North American Datum of 1927, in SW ¼ NW ¼ sec.17, T.33 N., R.8 W., Trinity County, CA, Hydrologic Unit 18010211, 300 ft upstream from mouth and 0.7 mi northeast of Lewiston.

DRAINAGE AREA.--9.10 mi<sup>2</sup>.

### **SURFACE-WATER RECORDS**

PERIOD OF RECORD.--1965-75 (miscellaneous measurement site), 1976 to current year.

REMARKS.--No discharge measurements were obtained during the 2013 water year. As the number of streams on which streamflow information is likely to be desired far exceeds the number of stream-gaging stations feasible to operate at one time, the U.S. Geological Survey collects limited streamflow data at sites other than stream-gaging stations. When limited streamflow data are collected on a systematic basis over a period of years for use in hydrologic analyses, the site at which the data are collected is called a partial-record station. Data collected at these partial-record stations are usable in low- or flood-flow analyses, depending on the type of data collected. In addition, discharge measurements are made at other sites not included in the partial-record program. These measurements are generally made in times of drought or flood to give better areal coverage to those events. Those measurements and others collected for some special reason are called measurements at miscellaneous sites.

The years given in the period of record represent water years in which measurements were made at the same or practically the same site.
